#### Differential Equations And Linear Algebra

Linear algebra has made Google one of the most valuable companies in the world Powers of a Matrix When the eigenvalues of  $A$  are known, we immediately know the eigenvalues of all powers  $A^k$  and shifts  $A - cI$  and all functions of  $A$  Each eigenvector of  $A$  is also an eigenvector of  $A^k$  and  $A - cI$  and  $A - cI$  : If  $Ax = \lambda x$  then  $A^k x = \lambda^k x$  and  $(A - cI)x = (\lambda - c)x$

### **Differential Equations and Linear Algebra**

There are some similarities between solving differential equations and solving polynomial equations. For example, given a polynomial equation such as  $3x^2 - 4x = 4$ ; it is easy to verify that  $x = 2$  is a solution to the equation simply by substituting 2 in for  $x$  in the equation and checking whether the ...
